About This Game

Deep Sorrow is a horror/adventure game which leads you to a bunker and makes you feel desperate to get out.

An abandoned bunker, screams from the deep... While you seek your lost friend, you encounter some beings. Are they real or are they part of your imagination? Are you alone or are there anyone else? Are you insistent on finding your friend or will you take your first chance to escape? If you can escape...

Deep Sorrow is more of a adventure game than a horror game, though it has tension on its own way.

Features:

- Stealth Gameplay
 - Looting
 - Crafting
 - Small Puzzles
- Tricky Level Design
- 'Vision' Gameplay - Special item which allows you to see things that you can not see with your own eyes.
- Memory Pieces - Which helps you to understand the story.

Very short and decent game. There's really not much to do and the plot has many holes. You are looking for someone that's been gone for 3 days. The gameplay doesn't have that much horror other than those floating spirit balls that attack you while they are invisible. Which there are items you can get that gives you the ability to see them. But you can easily go through them without the vision ability and less problem with them attacking you. You have a health bar of course, haven't died so I assume if you die you will maybe start over. BUT, you can heal yourself if you gather the items and create bandages. Pills also help recover. You also eventually will get a flashlight which requires batteries. The puzzles aren't that difficult and the batteries are not really that scarce.

I give this game a 8/10, the story needs to be a bit clear and the enemies to be more frightening. Nothing scary about floating spirit balls. But the atmosphere was pretty good though.

Edit: Forgot to mention there's NO saving in this game, which is not required anyways since as said the story is very short. Play it ONLY if you got free time (or go afk, which can work too).. I hate to say it but it seems very unfinished and not very scary at all almost childish, it could have potential but really unfinished game with no point or story...

I really don't recommend this as a game at all.... Deep Sorrow is a short but good horror/walking simulator game, I would recommend everyone to play it since the price tag is quite low. 8/10. Game has a really good immersion with good graphics and atmosphere. Nothing groundbreaking but a very decent job is accomplished. I played it three times so far to find all memory logs, I still miss couple of them.

Tension is set in a right amount, enough to keep you playing and putting you on edge, but also preventing you to smash your screen with fear.

More work could be put into enemies to give a better visual and toning down the resources to put a little more tension might help the immersion and atmosphere greatly.

For its price, gameplay is justified, I would honestly wanted to see a little more detail in tapes and a little more collectibles about story, just bits and pieces.

I would rate this game 7/10 because of the short tension and excitement brought to me.

Keep up the good work.. It's short, it's simple, but for the price, it's not that worth it. Buy it at sale price and enjoy the few achievements and short story.

its about .55USD per meg sized game

A lot of care and concern for the end user to spend about 20 minutes of their life running around in the dark with nothing to scare you, nothing to surprise or excite, just your lust for a flashlight, turning on the elevator, and finding the 'hidden; passageway. My achievements didnt even register it seems but who cares...

I nominated for CASH GRAB GAME OF THE YEAR

Im not one to give bums money, but hey, even Scrooge was a little jolly once.

no refund!. Visually the game looks superb but unfortunately nothing behind that.

Big irritation for me are the controls. You are stuck with no way to change which is a pain for the left handed amongst us.. A little walkthrough video you guys might enjoy, before you buy the game ;) youtu.be/kk1sstrwAWA?a.

[Boring, short \(20min\) uninspired 'horror' game. Decent atmosphere, that's about it.](#)

[Find stuff, unlock doors, run through the dark. No jump scares and barebones story. Pass.. 25 minutes of gameplay, menu bug which keeps main menu up on screen during play. Not scary. Waste of money.](#)
