## Gps Coordinate Converter With Keygen

Simple and useful application to convert coordinates between the degrees, minutes and seconds (DMS) and decimal degree (DD) format. In Windows 10 you can use this application with the "Get Started" option by clicking the "Convert Coordinates" button on the taskbar. Gps Coordinate Converter uses its own navigation map. Even with a large screen, this map can be displayed or zoomed out to see the full world map. If you prefer to use the map from Google you can easily switch to the Google map using the navigation button. While using the map from Microsoft, you can zoom in and out and switch to an aerial and bird's eye view. To do so simply click on the main navigation button and a drop-down menu will appear. You can access the third mode from the bottom of the menu. If you want to see the history of searches, simply click on the "History" button on the navigation menu. Once there, you can toggle the view as required. To convert degrees, minutes and seconds to decimal degree, simply click on the "CALCULATE" button in the navigation menu and a prompt will appear. Simply enter the degrees, minutes and seconds and press the "CONVERT" button. The calculator will open, and the result will appear in the same window. If you want to convert from decimal degree to degrees, minutes and seconds, simply click on the "DETERMINE" button in the navigation menu and a prompt will appear. Here you can enter the latitude and longitude values and press the "CONVERT" button. As stated before, you can turn off tapping on the map and also limit the number of entries added to the history of searches. You can also change the point size and format of the coordinates in history by clicking on the "POINT" button and choosing the desired appearance (see screenshot). To take a screenshot in "full size", click on the image icon
